

Main Bearings

Continental Z120 & Z129 Engines

To determine which main bearings you need for the Continental Z120 and Z129 engines, check to see if the bearings are flanged or straight shell. This will tell you which bearings to order.

These main bearings have a single flange front main bearing. They are part # 755M. One thrustwasher is needed and comes separately.

These main bearings are a straight shell main bearing and the thrustwashers are included. They are part # HM260S.
